Nguyễn Văn Phú

Backend Developer · PHP & Go

Ha Noi, Vietnam | +84 976 914 076 | phu0908204@gmail.com | github.com/phuphu0981 | LinkedIn | phunv-delta.vercel.app

Backend developer with nearly two years building e-commerce and CMS systems in PHP (Magento 2, Laravel, WordPress) and Go. At Magenest I take client modules from API design to production, and on the side I run my own products live. My goal is to grow into a backend engineer who owns system design, performance and security at scale.

SKILLS

Languages	PHP, Go, TypeScript / JavaScript, Python
Backend	Magento 2 / Adobe Commerce, Laravel, WordPress (WPGraphQL), Gin, GoFr, FastAPI, Node.js
APIs & Database	GraphQL, REST, MCP, MySQL, PostgreSQL, Redis, Kafka, Elasticsearch
DevOps	Docker Compose, Nginx, Linux VPS, Cloudflare Tunnel
Frontend	Next.js, React, Tailwind CSS

WORK EXPERIENCE

Magenest · Backend Developer — Dec 2025 – Present

PROJECT	CONTRIBUTION
Vivy Oct 2026 – Present Magento 2.4.9 · headless GraphQL	• Built a Vietcombank USD-rate module: daily cron sync, admin grid, GraphQL prices • Cut cache churn: purge GraphQL cache by tag, only when the rate changes • Exposed policy pages and storefront popup settings through GraphQL
Oroca May 2026 – Present Magento 2.4.8 · B2B/B2C	• Built the Clinic Setup lead module: REST + GraphQL, file upload, admin grid, alerts • Delivered B2B VAT invoicing via GraphQL, auto-filled from the company account • Offloaded product-label indexing to a message queue to cut indexer load • Enforced stock-aware quantity limits for bundle, grouped and configurable products • Rebuilt invoice PDFs; added Vietnamese URL keys with 301 redirects
AI Cypher Apr – Jul 2026 Magento AI add-on	• Engineered “Frequently Bought Together” end to end, from tracking to storefront • Exported session, cart and order data as a CSV feed for the AI recommender • Hardened sync with cron jobs, retries, a dead-letter queue, alerts and audit logs • Added a best-seller fallback plus admin pin, blacklist and manual sync controls
ACE Platform Sep 2026 – Present Go microservice	• Built a Go search service streaming Kafka events into OpenSearch 2.19 • Shipped search / suggest REST APIs and an admin reindex endpoint • Wrote a CLI for status, reindex and dead-letter retry • Tested with unit + integration suites in GitLab CI under an **80%** coverage gate
Fulbright University Aug 2026 Headless WordPress	• Co-built the Page Builder backend: revisions, slug locks, rate limiting • Secured the editor: revoking a builder token also ends the admin session • Added a translation API with per-language slugs for on-demand page copies • Delivered GraphQL types for courses, majors, people and events • Mapped roles and permissions for Microsoft Entra SSO sign-in
OpsCore Sep 2026 – Present WordPress · Elementor	• Built the company site as a custom theme plus site and leads plugins • Created editable Elementor widgets and a filterable case-study post type • Wired the contact form to Odoo CRM with per-field validation
Magento extensions Jan – Jun 2026 Magento 2.4.7 – 2.4.8 · PHP 8.4	• **Moneris Payment** — Closed 3DS account-takeover and forged-payment holes in v2.5.2 • **Abandoned Cart** — Migrated the retired Mandrill SDK to Mailchimp Transactional • **Gift Card Plus** — Upgraded to Magento 2.4.8 / PHP 8.4 and shipped release 1.1.3 • **Popup** — Fixed admin priority validation and shipped PHP 8.4-ready release 1.2.4 • **Vietmap API** — Designed a pluggable map module: Vietmap and Goong behind one contract • **Google Map API** — Added Vietmap v4 as a third provider beside Google and Goong • **Event Ticket** — Reproduced client bugs and traced them to a Magento version mismatch

HQ Group JSC · CoreSys Company · Backend Developer, Intern to Junior — Jan 2025 – Dec 2025

COMPANY	CONTRIBUTION
HQ Group JSC Apr – Dec 2025	• Automated **100%** of weekly reports by syncing ClickUp tasks into a Laravel KPI board • Cut manual payroll work by **80%** with a salary + affiliate revenue-share module • Designed stock-in / stock-out tracking synced across warehouse and branches • Shipped responsive pages from designs in Scrum sprints with BA and QA
CoreSys Company Jan – Apr 2025	• Built coresyscompany.com on Laravel MVC • Integrated Cloudinary media storage; set up automated emails and a CMS admin

PROJECTS

PROJECT	HIGHLIGHTS
Kerrax Go, Gin, MySQL, Redis, Next.js	• Launched kerrax.com, a live store for digital and AI accounts • Synced a multi-supplier catalog that auto-disables items once cost hits price • Built the order flow and admin accounting reports • Exposed a TypeScript MCP server so AI agents can search products and orders • Self-hosted on a VPS with Docker Compose, Nginx and Cloudflare Tunnel
Second Brain Node.js, Express, MCP, SQLite FTS5	• Designed a team wiki that each member's AI agent ingests and queries over MCP • Prevented lost edits with version-checked writes and git history • Shipped full-text search, a knowledge-graph UI and a one-line installer
OpenDox Next.js 15, pdf.js, pdf-lib	• Shipped opendox.vercel.app: **20+** PDF tools running 100% in the browser, no backend • Kept files private: merge, split, sign, redact and protect PDFs without any upload

EDUCATION

University of Transport Technology · B.Sc. Information Technology · GPA 3.6/4.0 · Merit scholarship — 2022 – Present
