Nguyễn Văn Phú

Backend Developer · PHP & Go

Ha Noi, Vietnam | +84 976 914 076 | phu0908204@gmail.com | github.com/phuphu0981 | LinkedIn | phunv-delta.vercel.app

Backend developer with nearly two years building e-commerce and CMS systems in PHP (Magento 2, Laravel, WordPress) and Go. At Magenest I take client modules from API design to production, and on the side I run my own products live. My goal is to grow into a backend engineer who owns system design, performance and security at scale.

SKILLS

Languages	PHP, Go, TypeScript / JavaScript, Python
Backend	Magento 2 / Adobe Commerce, Laravel 11, WordPress (WPGraphQL), Gin, GoFr, FastAPI, Node.js
APIs & Database	GraphQL, REST, MCP, MySQL, PostgreSQL, Redis, Kafka, Elasticsearch
DevOps	Docker Compose, Nginx, Linux VPS, Cloudflare Tunnel
Frontend & AI	Next.js, React, Tailwind CSS, Claude Code

WORK EXPERIENCE

Magenest · Backend Developer — Nov 2025 – Present

- **Vivy** (Magento 2.4.9, headless GraphQL): built a module that pulls the daily Vietcombank USD rate by cron into GraphQL prices; swapped full-page cache flushes for tag-based purges that fire only when the rate changes.
- **Oroca** (Magento 2.4.8, B2B/B2C): built a clinic lead module (REST + GraphQL, admin grid, alerts) and B2B VAT invoicing; queued product-label indexing; added stock-aware limits for bundle, grouped, configurable items.
- **AI Cypher** (Magento AI add-on): built "Frequently Bought Together" end to end: cart and order tracking, CSV feed to the AI recommender, best-seller fallback, cron sync with retries, dead-letter queue with alerts.
- **ACE Platform** (Go microservice): built a search service that streams Kafka events into OpenSearch 2.19: search / suggest API, CLI for reindex and DLQ retry, tests gated at 80% coverage in GitLab CI.
- **Fulbright University Vietnam** (headless WordPress): co-built the Page Builder backend (revisions, slug locks, rate limiting, token-revoke logout), a translation API and GraphQL schema for courses, majors, people, events.
- **OpsCore** (WordPress / Elementor): built the company site as a theme and two plugins: editable Elementor widgets, a filterable case-study post type, and a lead form that validates per field and sends leads to the Odoo CRM API.
- **Magento extensions:** Moneris Payment v2.5.2 (fixed 3DS account takeover and forged payment confirmation from a client security report; 2.4.7 support) · Abandoned Cart, Gift Card Plus, Popup (to 2.4.8 / PHP 8.4; Mandrill to Mailchimp Transactional) · Vietmap API, Google Map API (Vietmap, Goong) · Event Ticket (client support).

HQ Group JSC · Backend Developer, Intern to Junior — Feb 2025 – Oct 2025

- Linked the ClickUp API to a Laravel KPI dashboard, automating 100% of weekly progress reports.
- Built a payroll module (base salary + affiliate revenue share), cutting manual calculation work by 80%.
- Built stock-in, stock-out and balance tracking kept in sync across the main warehouse and branches.

CoreSys Company · Backend Developer, Laravel — Jan 2025

- Built coresyscompany.com on Laravel MVC: Cloudinary media storage, automated emails, content admin.

PROJECTS

- **Kerrax** (kerrax.com) · Go, Gin, MySQL, Redis, Next.js 16, Docker — Live store for digital and AI accounts: multi-supplier catalog that auto-disables items once cost reaches price, Binance Pay USDT wallet, admin accounting reports, a TypeScript MCP server for AI agents; self-hosted on VPS with Nginx and Cloudflare Tunnel.
- **Second Brain** · Node.js, Express, MCP, SQLite FTS5, Docker — Team knowledge base: each member's AI agent ingests and queries a shared Markdown wiki over MCP; git-versioned writes with version checks so no one overwrites another's edits; full-text search and a knowledge graph UI.

EDUCATION

University of Transport Technology · B.Sc. Information Technology · GPA 3.6/4.0 · Merit scholarship 2022 – Present
